

Residential Journey

1. HTML and js is changed for all select dropdown used in this journey

See in screenshot:

The screenshot shows a web form with two main sections. The first section, titled "Do you identify as a person with Disability?", has a checked checkbox. Below it, there are three input fields: "Type of Impairment" (a dropdown menu with "Select Impairment" as the placeholder), "Percentage of Impairment" (a text input with "Enter Percentage" as the placeholder), and "UDID Number" (a text input with "Enter UDID Number" as the placeholder). The "Type of Impairment" dropdown is circled in red. The second section, titled "Upload Documents For The Proof of Identity & Address", includes a link "To know the list of acceptable documents, click here". Below this, there is a "Select document" dropdown menu (with "Select" as the placeholder) and an "Upload Document" section with a "Browse" button. A note states: "File should be in .pdf, .jpg, .tiff or .png format & upload size should not exceed 5 MB". At the bottom, there is a consent checkbox with the text: "I hereby give my consent to SBI Card to proceed with upload documents for authentication."

Search Identifier for **Do you identify as a person with Disability?** :

impairment-block

And you must change highlighted HTML part

```
1981 <span class="ckyc-consent-text">
1982   Do you identify as a person with Disability?
1983 </span>
1984
1985 </label>
1986 <div class="impairment-block hidden lg">
1987
1988 <div class="d-flex form-group justify-between">
1989
1990   <div class="impairment-field col-md-4">
1991     <label for="add-type">Type of Impairment</label>
1992
1993     <div class="custom-select" id="add-type-wrapper"> ...
2069   </div>
2070 </div>
2071
2072   <div class="impairment-field col-md-4">
2073     <label for="impairment-percentage">Percentage of Impairment</label>
2074     <input
2075       type="text"
2076       id="impairment-percentage"
2077       name="impairment-percentage"
2078       placeholder="Enter Percentage"

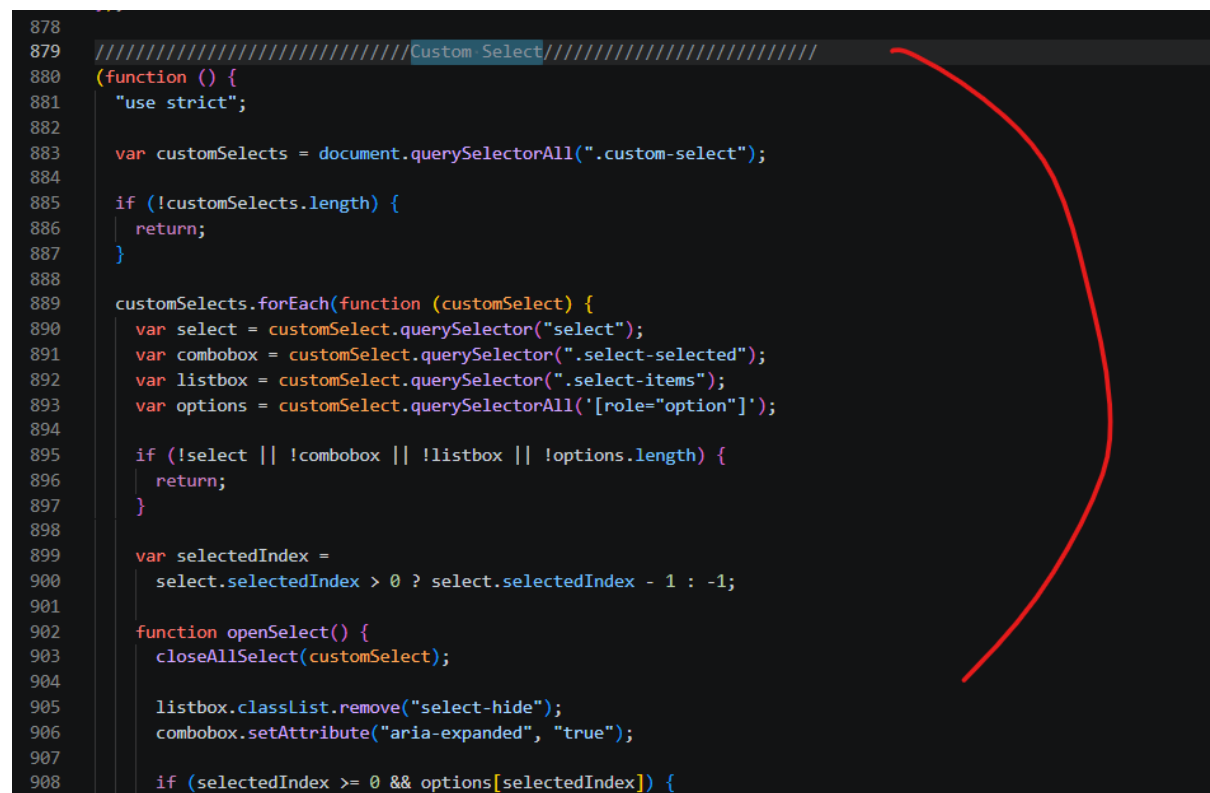

```

And after it search in js

Custom Select box

And remove this complete js and new js for Custom Select is added in main.js

See in screenshot for reference

```
878
879 //////////////////////////////////////////////////Custom Select//////////////////////////////////////
880 (function () {
881     "use strict";
882
883     var customSelects = document.querySelectorAll(".custom-select");
884
885     if (!customSelects.length) {
886         return;
887     }
888
889     customSelects.forEach(function (customSelect) {
890         var select = customSelect.querySelector("select");
891         var combobox = customSelect.querySelector(".select-selected");
892         var listbox = customSelect.querySelector(".select-items");
893         var options = customSelect.querySelectorAll('[role="option"]');
894
895         if (!select || !combobox || !listbox || !options.length) {
896             return;
897         }
898
899         var selectedIndex =
900             select.selectedIndex > 0 ? select.selectedIndex - 1 : -1;
901
902         function openSelect() {
903             closeAllSelect(customSelect);
904
905             listbox.classList.remove("select-hide");
906             combobox.setAttribute("aria-expanded", "true");
907
908             if (selectedIndex >= 0 && options[selectedIndex]) {
```

Like this where the Custom Select dropdown is there you need to changed HTML part for that Select Dropdown box and this above JavaScript will be used for all common.

2. In OTP popup some HTML part is changed

Search Identifier: **OTP Popup**

See in screenshot: These marked by red are changed

```

<!-- /////////////////// OTP Popup /////////////////// -->

<div class="modal-overlay popup-wrapp digilocker-popup-wrap kyc-Address-consent-checkbox-popup ckyc-kinpan-consent-
id="ckyc_otp_popup"
role="dialog"
aria-modal="true"
aria-labelledby="ckyc_otp_popup_title"
aria-describedby="ckyc_otp_popup_description"
aria-hidden="true">

  <div class="popup-inner" tabindex="-1">
    <h2 id="ckyc_otp_popup_title" class="sr-only">
      Enter OTP
    </h2>

    <p id="ckyc_otp_popup_description" class="sr-only">
      Please enter the OTP sent to you on your mobile number registered with CKYCR.
    </p>

    <div class="popup-checkbox-block letter-checkbox" style="display: none;">

      <label class="sbi-input-checkbox sbi-input-checkbox-KIN"
id="ckyc_otp_kin_checkbox"

```

Label is added just above the OTP input field

```

<div class="popup-otp-text text-center">
  Please enter the OTP sent to you on your mobile number registered with CKYCR.
</div>

<div class="popup-input-field">
  <label for="ckyc_otp_input" class="sr-only">Enter OTP</label>
  <input type="password"
placeholder="Enter OTP Here"
maxlength="6"
id="ckyc_otp_input">

  <div class="resend-block">

    <div class="resend-timer-block">
      <span>Resend OTP </span>
      <span id="ckyc_otp_resend_timer">00:84</span>
    </div>

    <a href="javascript:void(0);"
id="ckyc_otp_resend_button"
class="resend-button-block hidden">
      Resend OTP
    </a>

  </div>

```

OTP title converted div into h3 tag

```
aria-label="Close CKYC OTP popup">
</button>

<!-- OTP Content -->
<div class="ckyc-kinpan-consent-otpbox-popup"
  id="ckyc_otp_content"
  style="display: block;">

  <!-- <div class="popup-otp-title text-center">
    Enter OTP
  </div> -->

  <h3 class="popup-otp-title text-center">
    Enter OTP
  </h3>

  <div class="popup-otp-text text-center">
    Please enter the OTP sent to you on your mobile number registered with CKYCR.
  </div>

  <div class="popup-input-field">
```

And buttons

```
</a>
</div>

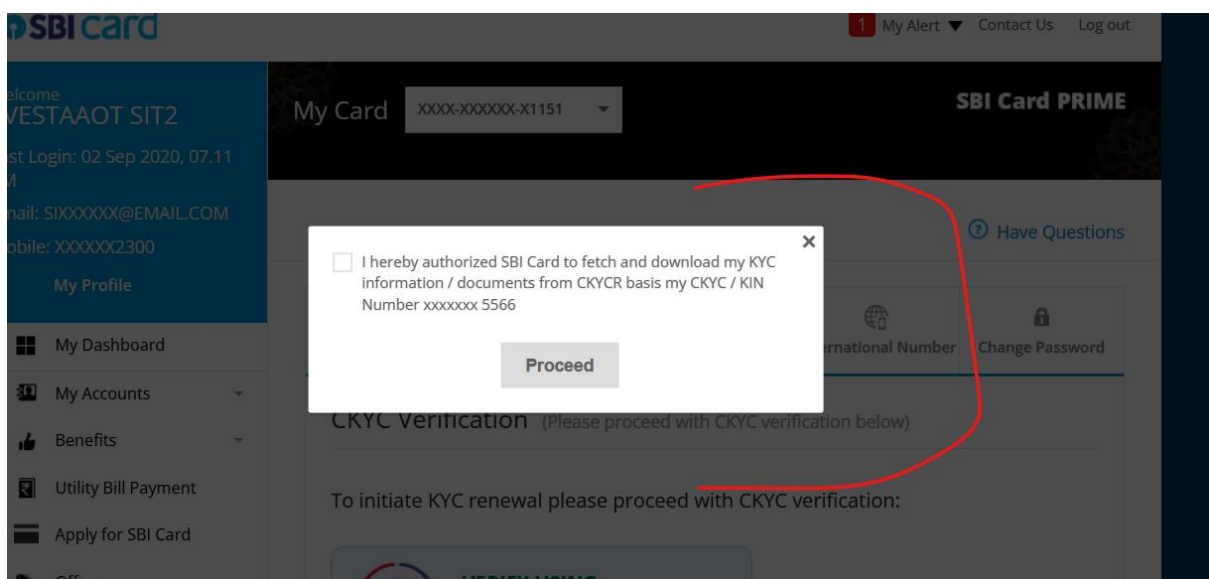

<div class="popup-button-block d-flex justify-content-center mt-22">

  <button type="button"
    id="ckycProceedFormSubmission_success_screen"
    class="popup-button button-blue gray-btn close-popup" disabled>
    Proceed
  </button>

  <button type="button"
    class="close close-popup" aria-label="Close CKYC OTP popup">
  </button>

</div>
```

These changes also done in small popup

And wherever the constant checkbox is used, html is changed for that also.

Note: These changes have been implemented to ensure that the component adheres to the required accessibility standards these all changes are implemented in latest HTML shared with this document.
